QUARTERLY NEWSLETTER TO  
EDUCATE PROSTATE CANCER  
SURVIVORS AND THEIR FAMILIES

Spring 2003

## Legislative UPDATE

### A Call to Action

**F**PCN is launching another major effort to have the Prostate Cancer Education and Awareness bill passed by the Florida legislature during 2003. During a series of legislative workshop meetings throughout the state in Tampa, Miami, and Jacksonville during 2002, FPCN met with survivors, supporters and medical professionals to discuss and strategize about drafting the new bill for the upcoming legislative session.

Sample letter shown on page 6

Senate Bill #324, The Florida Prostate Cancer Awareness Act of 2003, is being sponsored by Sen. Durell Peaden, Jr., Chairman, Appropriations Subcommittee on Health Services. Rep. Sandy Murman is sponsoring the House Prostate Cancer Bill. We need your support of this bill by writing to your elected officials asking them to vote for this legislation.

## Recurrence: When Prostate Cancer Comes Back

### What Does A Recurrence Mean?

A recurrence means that the cancer has returned after initial treatment. Prostate cancer can recur in the tissue next to the prostate or in the seminal vesicles (two small sacs next to the prostate that store semen). The cancer may also affect the surrounding lymph nodes in the pelvis or lymph nodes outside this area. It may also spread to tissues next to the prostate, such as the muscles that help control urination, the rectum, and/or the wall of the pelvis, and even bones or other organs.

### Surviving Prostate Cancer

More than 90% of men with prostate cancer can expect to live at least five years after the initial diagnosis. According to the American Cancer Society, 67% of men diagnosed with prostate cancer survive at least 10 years and 52% survive 15 years. Since many men who get prostate cancer are already elderly, they are more likely to die from other causes than the cancer.

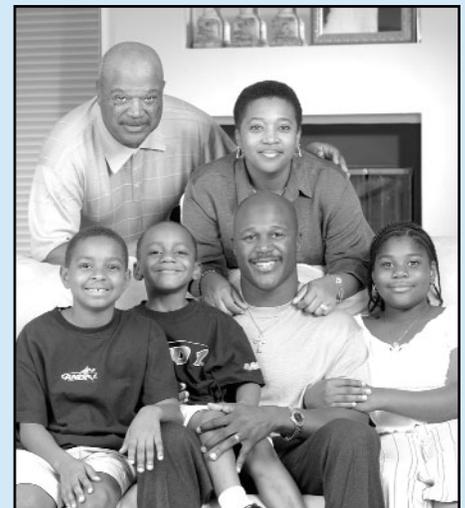

When prostate cancer is confined to the prostate gland, as occurs in 58% of

- continues on page 2

### SURVIVOR SPOTLIGHT:

## Ricky Reynolds

Former Tampa Bay Buccaneer and current Blake High School football coach Ricky Reynolds had successful prostate surgery in August 2002, and his prognosis for a full recovery is excellent.

Ricky Reynolds, seated, with his three children, his father, and his wife

**Y**ou're never prepared for the news. Ricky Reynolds certainly wasn't. At 37, this healthy, athletic man who spent seven seasons with the Buccaneers and three with the Patriots, thought that he was much too young to have prostate cancer. Of course, the idea that prostate cancer is a disease that

only strikes older men is a myth, and Reynolds is committed to making sure other younger men understand this fact.

- continues on page 7

## PRESIDENT'S VIEWPOINT:

# A New Beginning

The year 2003 marks the start of the Florida Prostate Cancer Network's (FPCN) launch of new ideas, new programs and its newsletter to keep you informed about the latest life-saving prostate cancer news.

Our goal is to strengthen our communication with you by providing quarterly progress reports and updates regarding the many activities and innovations that affect all of us regarding prostate cancer. Whether you or a family

**Bob Samuels,**  
Chairman,  
Florida Prostate  
Cancer Network

member has been touched by prostate cancer, we hope this newsletter will become another tool that will help you face the challenges – yes, at first you're confused, lost, scared. Just read our patient spotlight and ask Ricky Reynolds, tough NFL player, how

scared he was when he heard the news that, at 37, he was diagnosed with prostate cancer. He is now living testament to the life-saving benefits of early testing.

Who to talk to? How can you find out more? Look to us for honest, straight forward answers, a shoulder to cry on, and a hand to hold. We're patients, just like you, offering encouragement and hope for our future that prostate cancer is a surmountable challenge.

Join us and become involved. As with any "cause," we need your passion, dedication, determination, financial support and volunteering as we move closer to a 100 percent cure of this disease.

We're working towards having our elected officials understand that we need a Prostate Cancer Education and Awareness Bill with funding to support our statewide efforts. Read how you can help in this newsletter, and take action.

Together, in hope, we can accomplish miracles.

# Recurrence: When Prostate Cancer Comes Back

[continued from cover page](#)

all men with prostate cancer, 100% of these men can expect to live at least five years.

Among the 11% of men whose prostate cancers have already spread to distant parts of the body at the time of diagnosis, about 31% are expected to survive at least five years.

## How Do I Know if There is a Recurrence?

After prostate cancer treatment, you will have medical check-ups every few months as determined by your doctor. At each follow-up appointment, your doctor will order a blood test to detect PSA levels. This test will help the doctor detect a cancer recurrence.

When PSA test results suggest that the cancer has come back or continued to spread, X-rays or other imaging tests (such as a bone scan) may be done, depending on your situation and symptoms.

Usually after surgery to remove the prostate, PSA levels in the blood decrease and eventually become almost undetectable. After radiation therapy, PSA levels usually drop to a stable and low level. If the PSA levels begin to rise at any time after treatment, a local or distant recurrence may be suspected, requiring additional testing.

## What Factors Determine My Prognosis?

There are several signs that help predict the chance of your cancer coming back, including:

- Lymph node involvement: Men who have lymph node involvement in the pelvic region may be more likely to have a recurrence.
- Tumor size: In general, the larger the tumor, the greater the chance of recurrence.
- Gleason score: This scoring system measures how much the tumor cells resemble normal cells when viewed under the microscope. The grading scale is 1 to 5. Grade 5 tumors contain very abnormal and rapidly growing cancer cells. The

higher the grade, the greater the chance of recurrence. Your doctor can tell you your score when the biopsy results come back.

· Stage: This refers to the location and site of the cancer, including how far it has spread within the prostate, to nearby tissues and to other organs. Early prostate cancer (stages 1 and 2) is confined to the prostate. Late-stage prostate cancer (stage 3) has spread to areas just outside the gland. Stage 4 prostate cancer has spread to other organs or tissues further from the prostate. The stage of a cancer is one of the most important factors in selecting treatment options, as well as the most significant (but not the only) factor in predicting the outlook for the future.

## What Type of Follow-Up Treatments Are Recommended?

If prostate cancer recurs, follow-up treatment will depend on what treatment you have already had, the extent of your cancer, the site of recurrence, presence of other illnesses, your age, and other individual aspects of your medical situation.

If the cancer has spread beyond the prostate and surrounding tissue, hormone therapy may be recommended. New drugs to block the effects of male hormones, which can cause cancer to grow, and drugs to prevent prostate cancer growth are being developed.

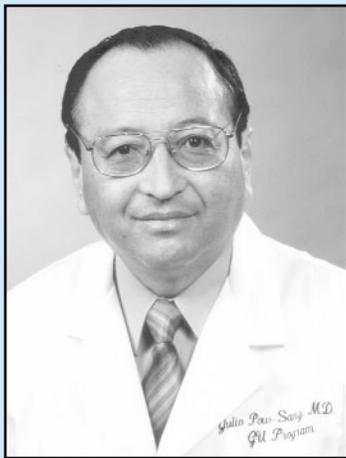

Radiation therapy or medicines may be given to relieve symptoms of bone pain. Chemotherapy or other treatments being medically researched may also be considered.

Several types of vaccines for boosting the body's immune system against prostate cancer cells are being tested in clinical trials. However, at this point, none of these vaccines are available for the general public.

PHYSICIAN'S CORNER:

# How to Obtain a Second Opinion for Prostate Cancer

Julio Pow-Sang, M.D., program leader of the Genitourinary Oncology Program at the H. Lee Moffitt Cancer Center & Research Institute

**W**hen it comes to the management of localized prostate cancer, the multiple options available make it very difficult for a patient to make a decision regarding the best treatment choice. The decision becomes easier when there is a better understanding of the cancer, knowledge of the treatment alternatives available as well as their risks and benefits.

The three steps for an effective second opinion are:

**1 Become informed about your cancer and learn the “language” of prostate cancer. You should at least know and understand the following terms:**

- Gleason Score
- PSA
- Stage of the cancer

**2 Know your options, what each procedure involves, as well as the risks and benefits for each treatment:**

- Surgery
- Radiation therapy - external
- Radiation therapy - seeds
- Combination of external + seeds
- Cryo surgery
- Observation

A good resource to complete the first two steps is the NCCN guidelines, available online at [www.nccn.org](http://www.nccn.org) and click on “Guidelines for Patients.”

**3 Go for a consultation with a specialist:**

- Urologist
- Radiation Therapist
- Medical Oncologist

A good resource to find a specialist to consult with is closer than you think. When you start talking about prostate cancer, you’ll be surprised to find that many of the people you know had prostate cancer or know someone who has gone through the same experience you’re going through. You’ll also find that most people are willing to talk about their experiences and could recommend a specialist for a second opinion.

Finally, there is plenty of time to really check out your options, as prostate cancer is a slow growing disease. Most of the time, you have months to do your research, consult with different specialists and make the treatment choice that is right for you.

## Upcoming EVENTS

**THE FPCN GALA 2003 WILL BE HELD SEPTEMBER 25, 2003 AT THE HYATT REGENCY HOTEL, 211 NORTH TAMPA STREET, DOWNTOWN TAMPA.**

This year, our featured honoree will be Monsignor Lawrence Higgins.

We anticipate a greater turnout than last year, so mark your calendars now and call for early reservations at (813) 806-2800.

# Cancer Facts & Figures 2003

## U.S. INCIDENCE RATES

Total new cancer cases	1.3 MILLION
New prostate cancer cases	220,900
New breast cancer cases	212,600
New lung cancer cases	171,900
New colon cancer cases	105,500

## TOP PROSTATE CANCER STATES

State	New cases	Deaths
California	20,500	2,700
Florida	15,800	2,100
New York	14,000	1,800
Texas	13,200	1,700
Pennsylvania	12,000	1,600

## Prostate Cancer FACTS

- Prostate cancer incidence rates are 60% higher for African-American men than white men.
- Prostate cancer deaths are 2 times higher for African-American men than white men.
- Risk factors: age, race, and family history.

\*Source: American Cancer Society Facts & Figures 2003

## FLORIDA NEW CASES

Total new cases	96,100
Prostate cancer	15,800
Breast cancer	13,500
Lung cancer	13,200
Colon/rectum cancer	10,200

## U.S. DEATH RATES

Americans expected to die of cancer in 2003	556,500
Lung cancer	157,200
Colon/rectum cancer	57,100
Breast cancer	40,200
Prostate cancer	28,900

## FLORIDA CANCER

### DEATHS

Total new cancer deaths	40,100
Lung cancer	12,100
Colon/rectum cancer	3,900
Breast cancer	2,500
Prostate cancer	2,100

## Prostate Cancer AT-A-GLANCE

September is National Prostate Cancer Month.

- 25% of all newly diagnosed prostate cancer is in men under age 65
- 95% is curable if caught early (before symptoms)
- 60% higher incidence of prostate cancer among African-American males and mortality at twice the rate of white males

### TESTING

- Prostate-Specific Antigen (PSA) blood test
- Digital Rectal examination (DRE)

### TREATMENT OPTIONS

- Radiation – external beam
- Radiation – seeds – brachytherapy
- Hormonal therapy
- Surgery – radical prostatectomy
- Cryosurgery – freezing
- Watchful waiting

## Your Generosity and Support Can Save Lives

**T**he Florida Prostate Cancer Network depends on the generosity of our donors to continue the fight against prostate cancer. Your donation will help save thousands of lives through awareness and advocacy.

### How to Donate:

Make check payable to: The Florida Prostate Cancer Network

- **By Phone** Using VISA or MC: 813-806-2800  
Toll-Free: 1-866-352-3236
- **By Mail** Using VISA/MC or check: Fill out and mail the enclosed donation envelope

### Memorial Gifts

Memorial gifts are recognized and acknowledged by the Florida Prostate Cancer Network. Your memorial gift is a special way to honor the memory of someone while helping the Florida Prostate Cancer Network.

Complete the Memorial Gifts section of the Contribution Form and we will send an individual card with your name and the name of the honored person to the person or persons you designate. The amount of the donation will not be mentioned.

### "In Honor of" Donations

"In honor of" gifts are recognized and acknowledged by the Florida Prostate Cancer Network. Your "in honor of" gift is a special way to recognize someone while helping the Florida Prostate Cancer Network.

They are great for birthdays, anniversaries, get-well greeting, holidays, or for any other important milestone.

### Corporate Matching Gifts

If your employer has a "matching gift program," complete any paperwork required by your business and send in, using the enclosed envelope.

# Gaining Legislative Ground in Florida

A screenshot of the Florida Prostate Cancer Awareness Act of 2003 petition form. The form is titled "Petition for Cancer Awareness Act 2003" and "Fighting Prostate Cancer Together". It includes a "NAME" section with fields for First Name, Last Name, and Address. There is also a "PHONE" section with fields for Phone Area Code, Number, and Fax Number. A "SIGNATURE" section is at the bottom with a "Signer" radio button selected. The form is set against a background of the Florida state flag.

Go on-line to sign the petition form in support of the Prostate Cancer Awareness Act of 2003 at [www.florida-prostate-cancer.org](http://www.florida-prostate-cancer.org)

This is it. Our chance to change the way prostate cancer is funded in Florida so that new, innovative treatment and a cure can be found. With the pending legislation for the Florida Prostate Cancer Awareness Act of 2003, FPCN must have your help and support to push this legislation through.

Here's what you can do:

- Educate and influence your legislator about the importance of this bill;
- Help organize and carry out grassroots efforts to further the cause;
- Write to your local newspaper editorial board; their support is crucial to build awareness for our issue, and they possess great influence on how people in the community perceive an issue. Have your newspaper take an official position on the importance of Florida's Florida Prostate Cancer Awareness Act of 2003.
- Sign the online petition at [www.florida-prostate-cancer.org](http://www.florida-prostate-cancer.org) to support this important legislation.
- Volunteer to work as a prostate cancer advocate; we'll give you all the tools and training you need to be effective at this opportunity.
- Provide financial support to FPCN to help the organization carry out this and its many other important missions.

## Legislative Update: Take Action

The letter below is only an example. You may copy parts of it if you wish, but please feel free to put it into your own words, add your own experiences, or leave parts out, or go to the FPCN Web site for a sample letter. The important thing is to let them know that you support the bill and want them to support it too. Write your letter today. Together, we can make a difference.

### How to address the Governor and your lawmakers:

Use "The Honorable \_\_\_\_\_" and begin the letter "Dear Senator" "Dear Representative" or "Dear Governor." If writing to a committee chair or the Speaker of the House, address the letter "Madame Chairwoman/Mr. Chairman" or "Mr. Speaker."

You can send your letter to the Governor at this address: PL 05 The Capitol, 400 South Monroe Street, Tallahassee, FL 32399-0001, or you can write him an email to [jeb.bush@myflorida.com](mailto:jeb.bush@myflorida.com). You may also call his office to voice your support of this bill at (850) 488-4441, or fax your letter to the Governor's office at (850) 487-0801.

For a directory of the Florida House of Representatives and their addresses, log on to [www.leg.state.fl.us/Publications/2001/House/administrative/memdir.pdf](http://www.leg.state.fl.us/Publications/2001/House/administrative/memdir.pdf).

Month,Day, 2003  
The Honorable Governor Jeb Bush  
Tallahassee

Dear Governor:

As a (cancer survivor/spouse of a survivor/health care professional/concerned citizen), I am writing to urge you to support The Florida Prostate Cancer Awareness Act of 2003 Senate Bill #324. (Please add a sentence or two describing how prostate cancer has affected your personal life and/or that of your family. Be sure to mention the illness or death of a loved one in your family or community, if applicable).

It is estimated that 15,800 new cases of prostate cancer will be diagnosed in Florida during 2003. And nearly 2,100 of our spouses, fathers, and sons will die from it. So many of these deaths could be avoided through early detection and treatment. In fact, there is a 95% five-year survival rate for men who receive treatment at the earliest stages of the disease. If we raise awareness and convince people to talk to their doctor about screening, we can save thousands of lives.

Please let me know if you plan on supporting this important legislation by sending me a letter stating your position on The Florida Prostate Cancer Awareness Act of 2003 Senate Bill #324.

Thank you for your time, and I await your reply.

Sincerely,

Your name and signature

IN THE NEWS:

## Senator Kerry diagnosed with prostate cancer

Massachusetts Sen., and Democratic presidential hopeful John Kerry successfully underwent surgery on February 12, 2003 to treat an early form of prostate cancer, his doctor reported, saying that “everything went well”.

Kerry, 59, whose father died of prostate cancer at 85, underwent a routine checkup in December of 2002. Doctors performed a biopsy at Massachusetts General Hospital and Kerry learned on Christmas Eve that he had a small, early stage cancer.

Dr. Patrick Walsh, urology chief at The Johns Hopkins Hospital, performed the surgery. Walsh said Kerry had a very early, curable form of cancer.

Kerry is among a long list of public figures diagnosed with prostate cancer, including FBI Director Robert Mueller, New York Yankees manager Joe Torre and former Sen. Bob Dole.

"I am lucky," said Sen. Kerry. "I'm going to be cured."

## USF Students Support FPCN's Efforts

Advertising student Joel Barbosa, president, University of South Florida Advertising Association, presents Bob Samuels, chairman, FPCN, with a contribution to the organization. The Ad Club at USF is designing a brochure for FPCN and also donated proceeds from a fundraising event the Club organized.

SURVIVOR SPOTLIGHT:

## Ricky Reynolds

continued from cover page

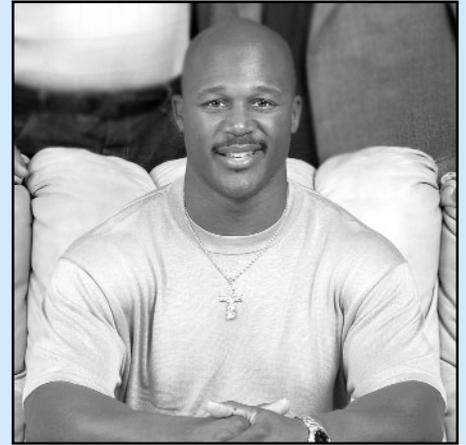

Prostate cancer is found among African-American males at a disproportionate rate to white males and has double the mortality rate.

As a father to Nicole, Adarius, and Julius, and husband to Pamela, Reynolds knew he had to find out more information about the disease so he could make educated decisions about his options.

He turned to the FPCN for information, advice, and a shoulder to lean on during some difficult times. After speaking with Bob Samuels, chairman, Florida Prostate Cancer Network, Reynolds appeared in the past at Samuels' annual African-American Health Forum at Hillsborough Community College, where more than 3,000 men have been tested.

"FPCN's network is awesome," said Reynolds. "They have a great wealth of knowledge and information and really helped me, especially early on when you just don't know which direction to turn." Reynolds is thankful to FPCN for the great advice and support he received along the way.

At his father's urging two years ago, he requested as part of his physical a Prostate-Specific Antigen (PSA) test. Reynolds' father, Henry, had been diagnosed with the cancer at age 56. Both his grandfathers also had the disease.

Ricky Reynolds, prostate cancer survivor

And although medical guidelines recommend men be tested beginning at 40 or 45, Reynolds says his family history prompted him to have the test performed at an earlier age.

After his surgery in St. Louis in August 2002, Reynolds' prognosis is excellent. The procedure successfully removed all the cancer. At the time, Reynolds was the youngest patient for surgeon William Catalona, who helped develop the PSA test.

"There are no rules in this game," said Samuels, a former banker and prostate cancer survivor. "Everyone wants logic and there's no logic to cancer."

Samuels said he's glad to have a spokesman in Reynolds, now intent on getting the word out that it's never too early to be tested.

## Welcome, FPCN's Office Manager

Tonya Goforth has joined FPCN as office director.

She previously contributed her organizational talents to the American Cancer Society serving as the research manager for the State of Florida. She's also a semi-retired Chief Petty Officer, serving 15 active years in the United States Navy.

A graduate of Columbia College with a Bachelor in Business Administration, Goforth lives in Tampa with her husband, Gene, and two sons, Michael, 13, who is severely autistic, and Matthew, 11. When not working to educate the public about prostate cancer, she's actively counseling families with children who have been diagnosed with autism.

Tonya's email address is [tgoforth@florida-prostate-cancer.org](mailto:tgoforth@florida-prostate-cancer.org).

# About THE NEWSLETTER
